- Hotel accommodation and ground transportation are at the participant's charge but centrally-organized by the Mérieux Foundation.

*VAT included. All fees are due in full to confirm participation.

**Sponsoring organizations will benefit from a program fees deduction based on their funding support.

des racines pour la vie • roots for life

ABOUT THE COURSE

After the success of its inaugural edition in 2019, the second edition of the AMR Course will take place from November 1-5, 2021 at Les Pensières Center for Global Health.

Antimicrobial resistance (AMR) is a growing global public health menace that threatens the prevention and treatment of bacterial diseases. The AMR-Global Action Plan (GAP) by WHO (World Health Organization) and One Health global strategy consider fostering awareness and understanding on antimicrobial resistance to be a priority and essential for the adoption, deployment and implementation of country AMR-National Action Plans (AMR-NAPs). To support this critical effort, the Mérieux Foundation and Université de Paris have joined their expertise and capacities to support the AMR-GAP by designing a course to address concretely -from plan to action- the five objectives of the AMR-WHO-GAP. Together, the Mérieux Foundation and Université de Paris propose a residential intensive training course on AMR in a One Health perspective, principally targeting audiences from low- and middle-income countries.

The course advocates for the value of the One Health approach to fight against AMR and builds capacity for critical decision-making in low-and middle-income countries through education, partnerships and networks.

The program is based on the five WHO-AMR-GAP objectives (one objective per day):

Day 1

The role of antibiotics and current challenges – improving awareness and understanding of antimicrobial resistance

Day 2

Strengthening knowledge and evidence through monitoring & surveillance

Day 3

Interventions to tackle AMR

Day 4

Optimizing the use of antimicrobial medicines in human and animal health

Day 5

Policy-regulation-governance and the economic case for global sustainable investment to tackle AMR
